Eric,

Here is a spreadsheet that shows how three models to predict PCB-153 concentrations in breast milk stand up. We ran simulations for 8 individuals whose blood and breast milk concentrations have actually been measured. All of the numbers you see in this spreadsheet are simulations, though. Some of the other tabs on the workbook contain graphics that help visually compare the results of the 3 models.

I've also attached the abstract that we submitted for a poster presentation at the Society of Toxicology meeting in Salt Lake City this March.
